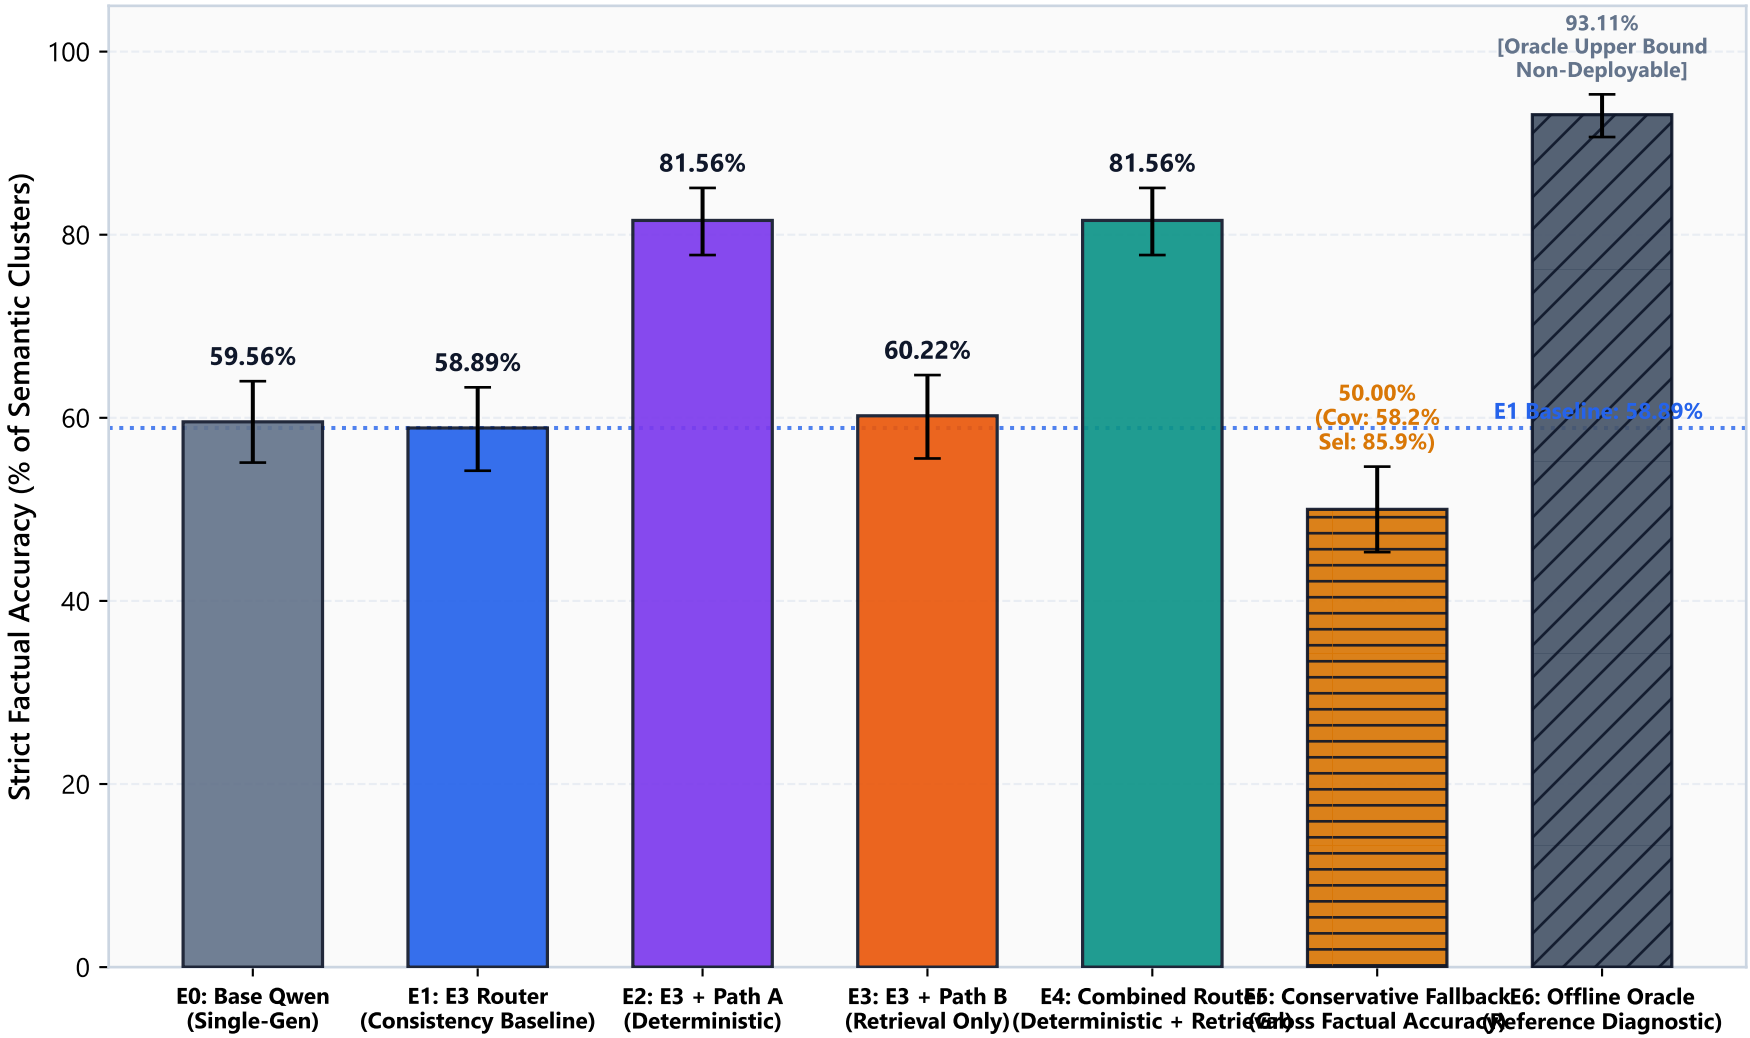

Figure 2: Phase 6 Cluster-Level Factual Accuracy Across Experimental Conditions
Evaluated on Frozen Untouched Test Set (N = 450 Clusters, 1,800 Prompts) with Exact 95% Wilson Confidence Intervals

Note: Cluster accuracy requires verified factual correctness across prompt variants. E5 abstentions (41.78%) are scored 0.0 in gross accuracy; E5 selective accuracy is 85.88% (225/262). E6 utilizes evaluation labels strictly offline as an unattainable diagnostic upper bound.
