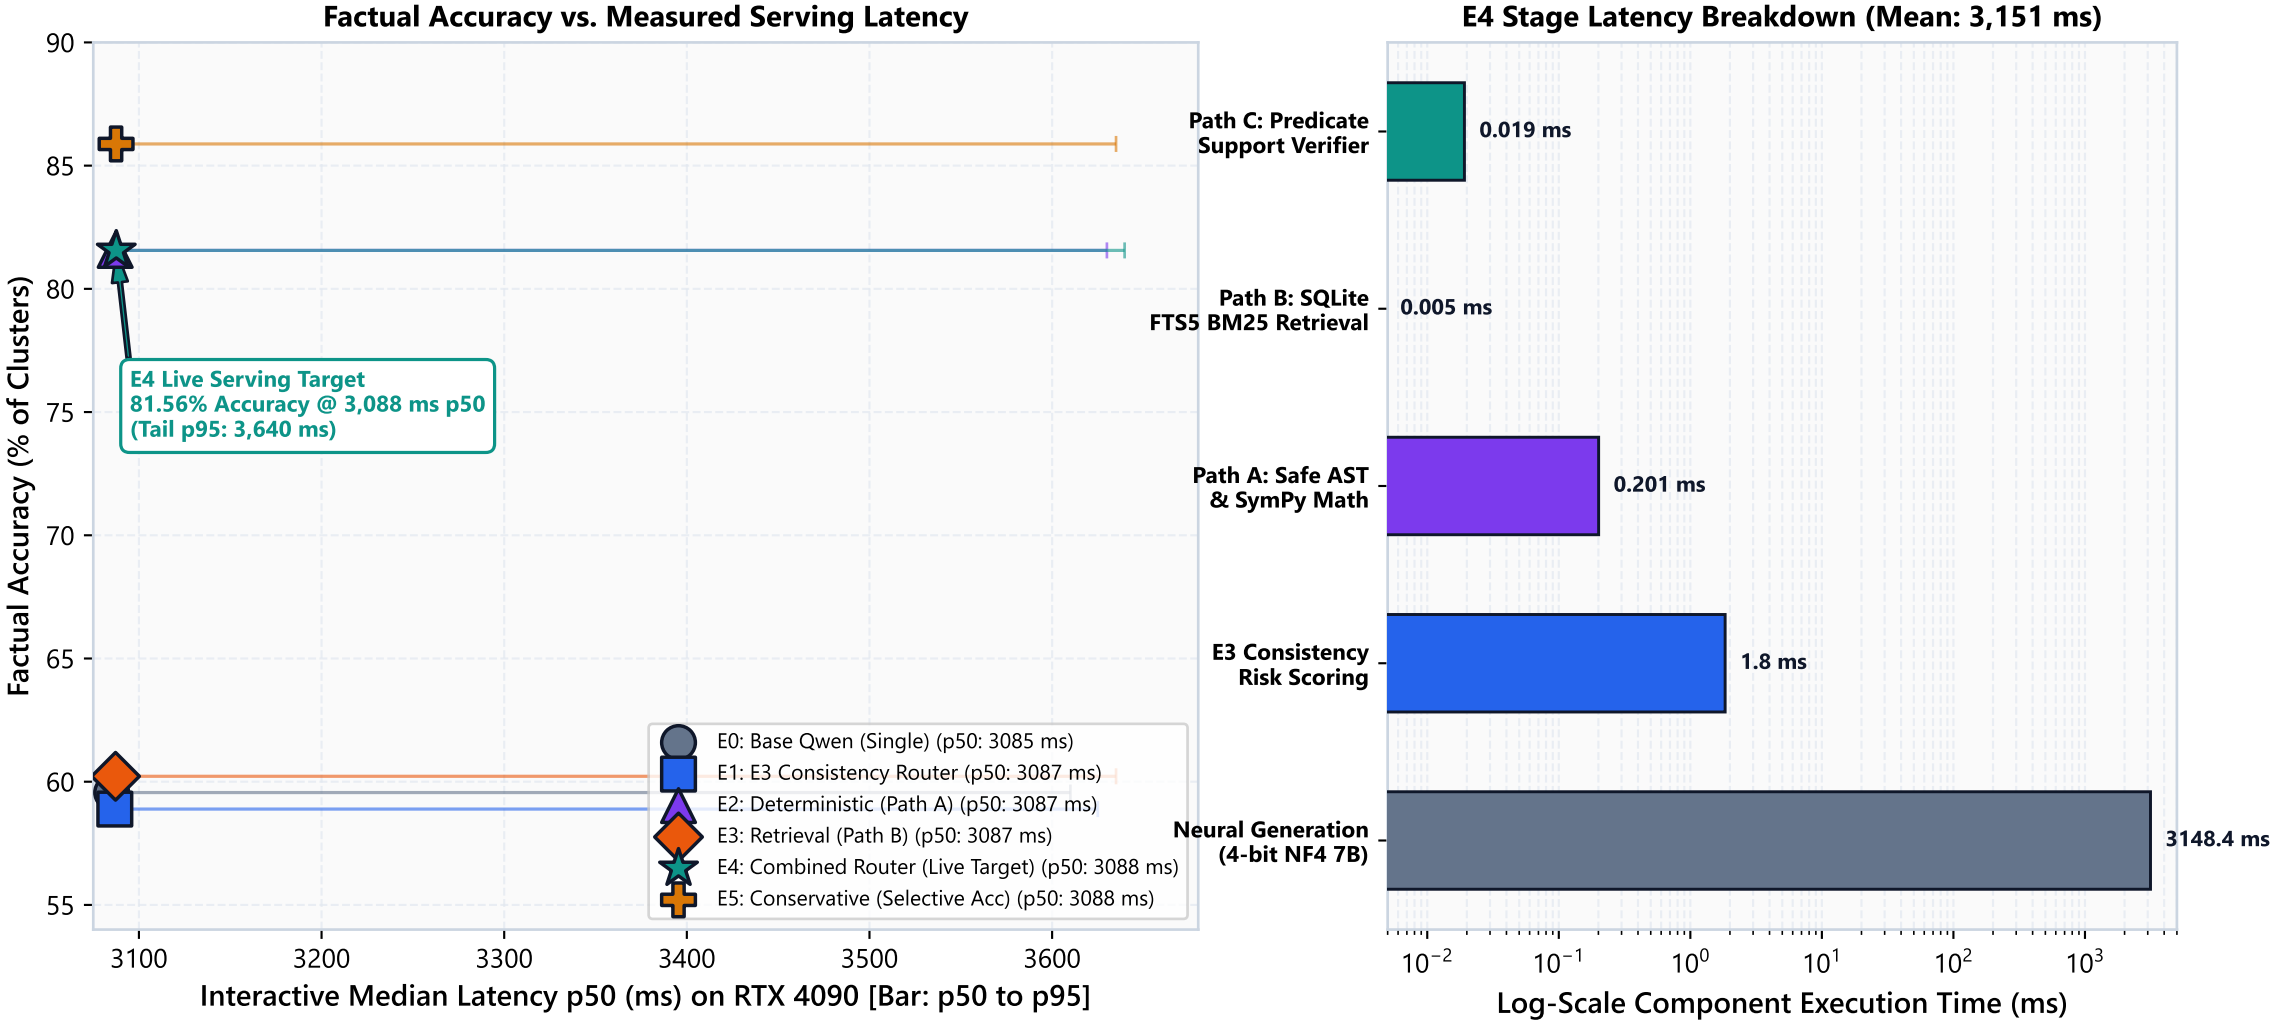

Figure 4: Real Live Serving Latency and Verification Layer Overhead on NVIDIA RTX 4090
Hardware-Synchronized Profile Distinguishing Neural Generation (99.92%) from Sub-Millisecond Verification Tools (0.08%)

Methodological Note: Phase 4 reported 660.1 ms analytically based on batched offline generation.
Phase 6 measurements are real interactive single-stream serving turns captured with torch.cuda.synchronize() on physical RTX 4090.
