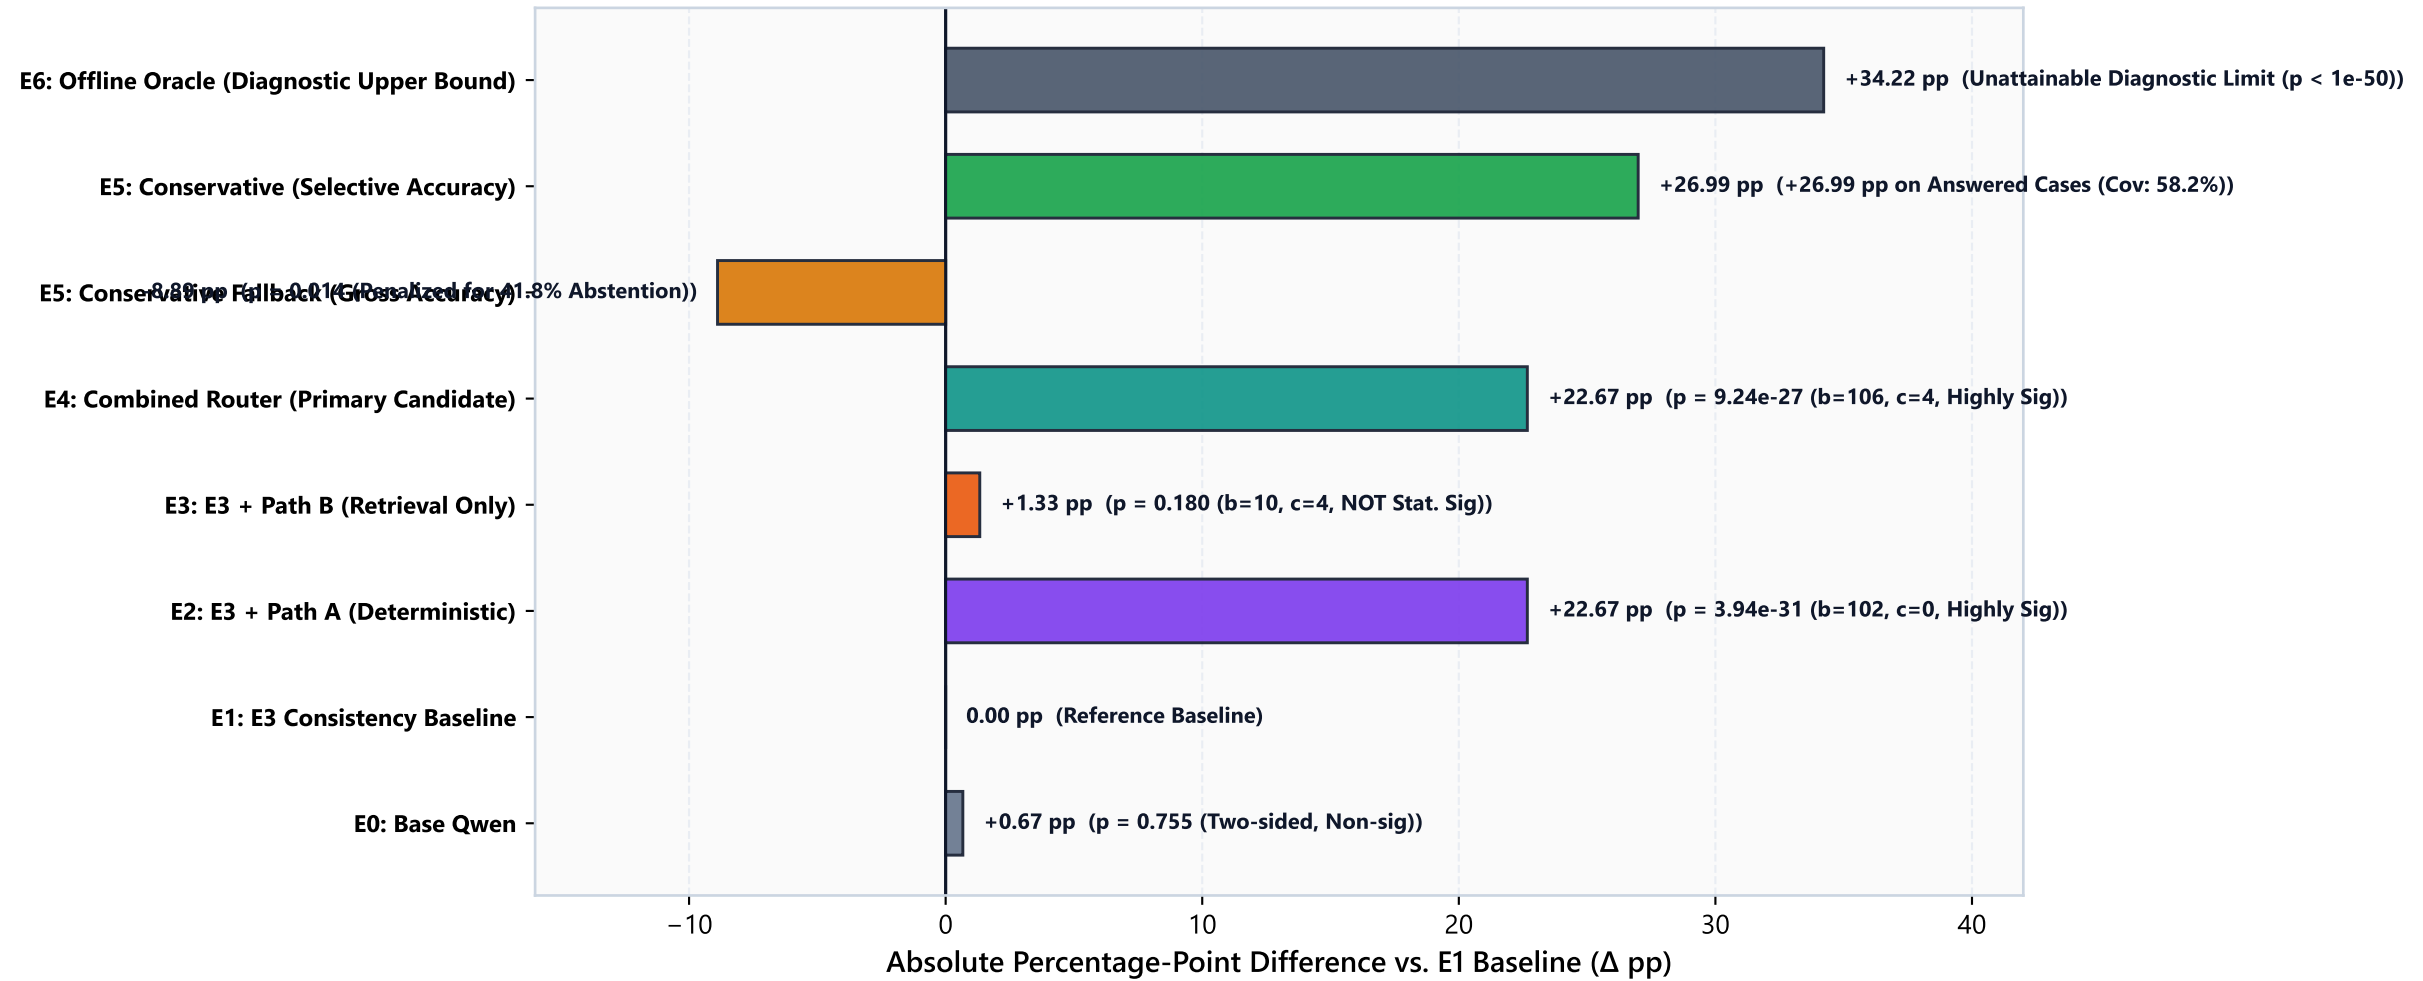

Figure 3: Absolute Factual Accuracy Gains Over E3 Baseline (N = 450 Clusters)
Reporting Exact Paired McNemar Test Significance, Discordant Wins (b) vs. Losses (c), and Selective Performance

Caution: E3's +1.33 pp gain (b=10, c=4) has McNemar p = 0.180 and must NOT be claimed as statistically significant.
E2 and E4 gains (+22.67 pp) are confirmatory and survive Holm-Bonferroni correction (p << 0.001).
